

**FOOD  
TECH**

**planners · engineers · builders**

Happy and healthy spring wishes from Food Tech. Our workload continues to grow both domestically and internationally with a number of clients restarting projects that had been idled during the economic slow-down. Banks seem to be financing more deals and subcontractors/suppliers/vendors are offering some of the lowest pricing seen in years. Recent project awards include major new distribution centers for Harbor Wholesale in Washington State and Nash Finch in Georgia. These organizations know that now is the perfect time to invest in new facilities, productive material handling systems and energy efficient/green technologies. We are also very proud to be designing/building the largest and most advanced fresh-cut fruit & vegetable process plant in China for Ace FreshKeeping.

With fuel prices and transportation costs rising, Logistics Engineering plays an even greater role in today's competitive economy and Food Tech's Facility Planning & Feasibility study experts can assist you in determining how to get goods to market most cost effectively. Recent studies have included Harris Teeter, Budweiser and Naked Juice. Please don't hesitate to contact us if you have questions on your facilities, their locations and how to maximize inbound/outbound logistics efficiencies.

Best Regards,  
**Mike Golden**
